

What **benefits** do Phoenix Electra offer on the environment side?

100% Emission free of CO2 and NOx, and auxiliary engine noise, Electra is the first professional spreader able to meet the Kyoto protocol values and respect our cities and rural areas.

100% Sustainable, the first completely sustainable professional salt spreader on the market today; we have endeavoured to create equipment that respects the environment, avoids the waste of natural resources and reduces emissions without compromises on the performance side.

99% recyclable; zero environmental impact through recycling and reusing materials. Less than 1% is not recyclable but is reusable.

100% Eco friendly through the complete elimination of hydraulic filters, pipes or oil disposal; there are no pollutants to be disposed over the entire life cycle of the unit.

75% more efficient energy consumption, compared to the traditional hydraulic systems.

Electra is a sustainable solution ready today, representing our commitment to build a better future for our children.

At Bucher Municipal we design innovative solutions for cleaning and winter maintenance and help our customers to grow and make their work more efficient and profitable. With over 200 years in the business, we are committed to helping you accomplish more with less. We are proud to be considered a reliable partner and work at local level with you to create a smarter, cleaner and more efficient future.

Phoenix Electra

The fully electric spreader

The **Green** revolution with excellent **performance**

Phoenix Electra is more quiet than traditional solutions, has zero impact and requires minimal maintenance over its lifetime.

Electric system
The electric system is designed to perform fast repair interventions, thanks to the service friendly layout. Through the remote control is possible to know which equipment needs maintenance, transforming unplanned stops to shorter and fewer planned service time, thus increasing service availability.

Motor assembly
Electric motor with integrated inverter allows fine tuning, noticeable power and high efficiency. The compact design avoids dispersion or interference making it suitable to be used in every field. Motor and inverter assembly certified IP67 ingress protection rating.

Battery
Latest technology maintenance free lithium battery, allowing partial and fast charging cycle without damages and designed for up to 9000 working hours. Battery management system with smart technology enabling real time remote diagnosis, automatic temperature protection, automatic cell voltage balance. 48v low voltage electric system enable safe and easy service.

Control panel
EcoSat10 belong to the latest generation of microprocessor based control systems, with maximum flexibility in programming and displaying the different parameters. Integrates a satellite navigation module, which guide the driver with vocal and visual messages. Unique design with 3 lateral knobs and 7" colour display.

Bucher ASISST
ASSIST enables cost-effective, flexible and efficient winter services thanks to its innovative tools for the service responsible as well as for the driver. ASSIST reduce the operator workload while allowing him to comply with operational procedures, due to the man-machine collaboration, improving the winter road maintenance quality.

Online management
Accessible from everywhere, using a simple internet connection; all the tools used for winter services management are available through a single web portal. Real-time weather analysis, telemetric and road morphology studies offer to the service responsible all necessary data to create precise winter maintenance mission, anytime and anywhere with the guarantee to carry out the exact planned procedure.

Spreading automation
Winter maintenance operators are helped by an automated system, able to adjust autonomously each spreading parameter; this means that the equipment always applies the exact dosage with the right pattern. The on-board unit includes an accurate GPS navigation system able to guide the operator with visual and vocal messages. Automated spreading combined with satellite navigation, results in economic use of de-icing materials, the best winter maintenance operations with any level of driver skills while reducing their workload.

Cloud connection
The cloud connection makes possible real-time data sending and collecting both for on-board unit and the web portal; this enables features like live tracking, mission modification or data analysis from remote. Moreover it helps the user, or directly the Bucher Municipal service, to determine the condition of in-service equipments in order to predict when maintenance should be performed, avoiding unplanned stops.
